MACHINE LEARNING IS...

FINDING A FUNCTION

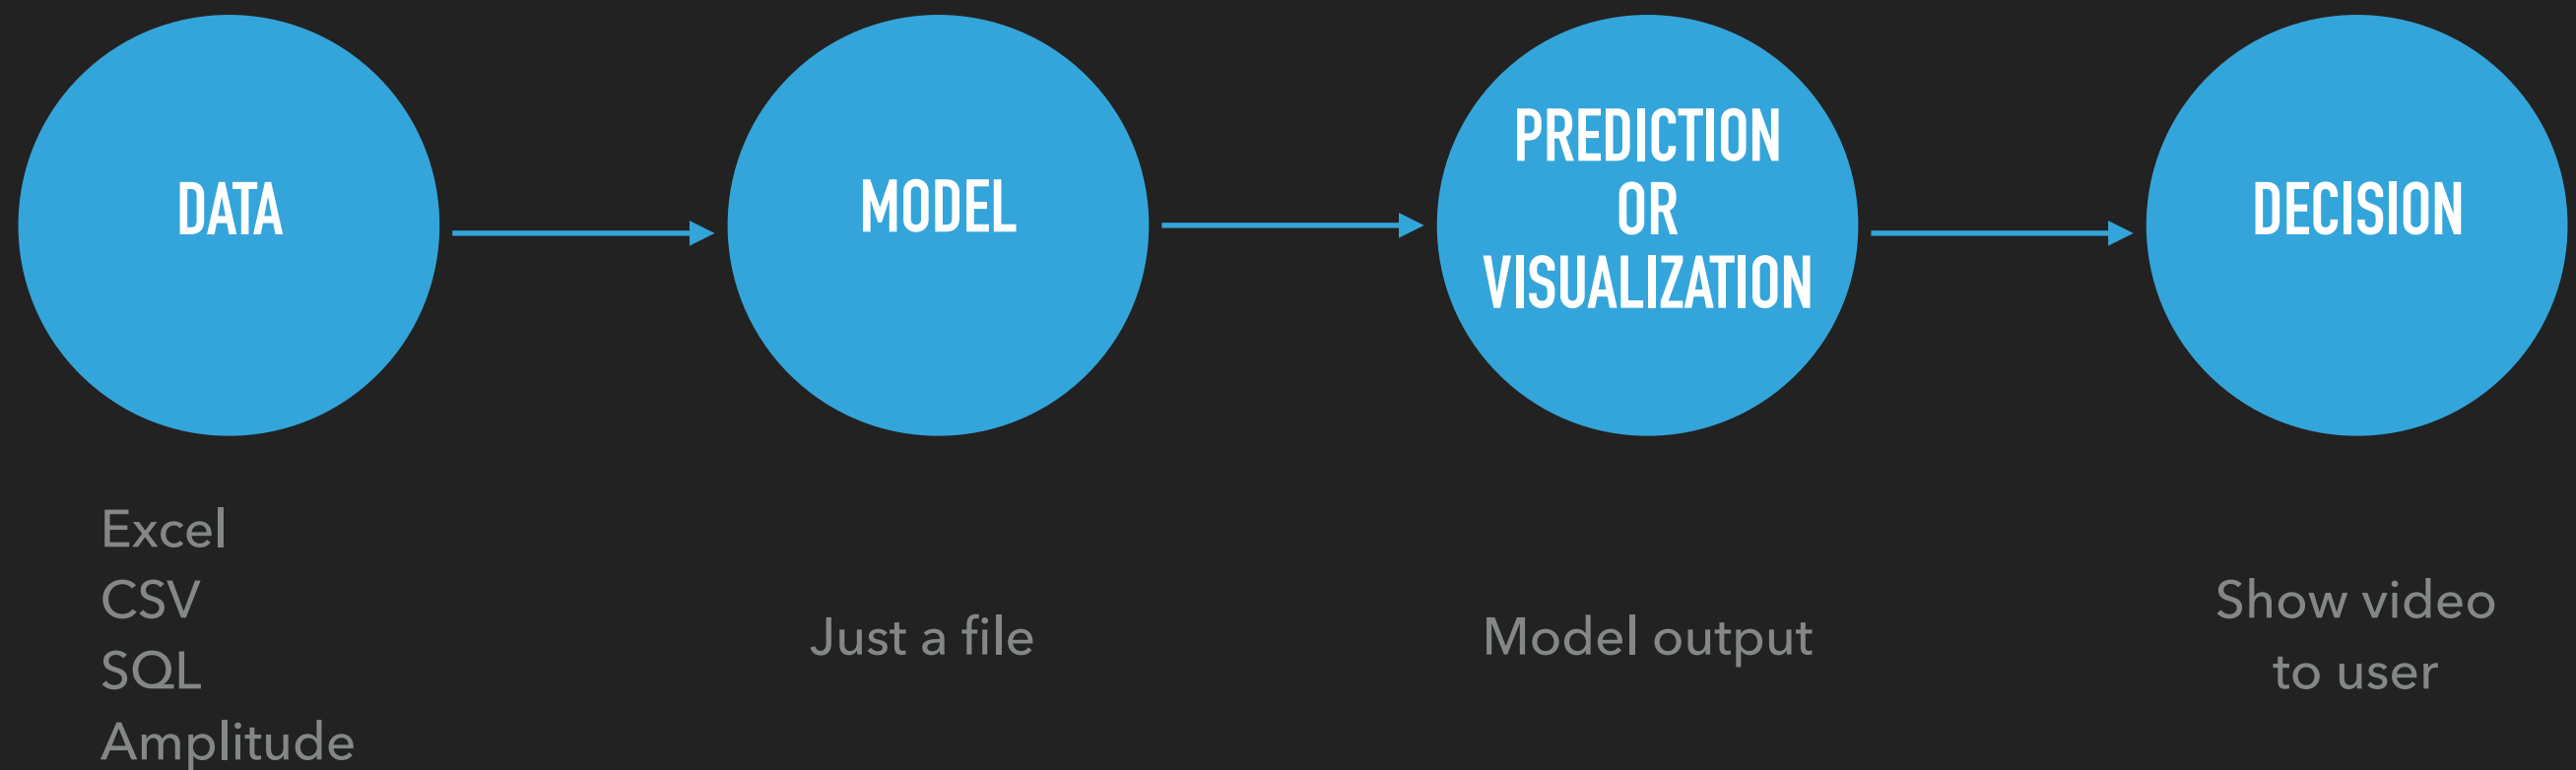

(THAT DESCRIBES YOUR DATA)

ARTHUR SAMUEL, 1958

“How can computers learn to solve problems without being explicitly programmed?”

NOWADAYS

RECOMMENDATION SYSTEMS

NSFW DETECTION

VOICE RECOGNITION

DATA VISUALIZATION AND ANALYSIS

MORE

Users	Age	Gender	Country	Watch video X Until the end
1	14	M	BR	1
2	36	F	US	0
3	25	M	AR	1
4	44	F	PL	0

LEARNING**

WATCH VIDEO X

Classification: (0 or 1)

Prediction: 80%

$$f(x_1, x_2, x_3, x_4, \dots, x_n) = y$$

$$f(\text{age}, \text{gender}, \text{country}) = \text{watchVideoUntilEnd}$$

LINEAR REGRESSION

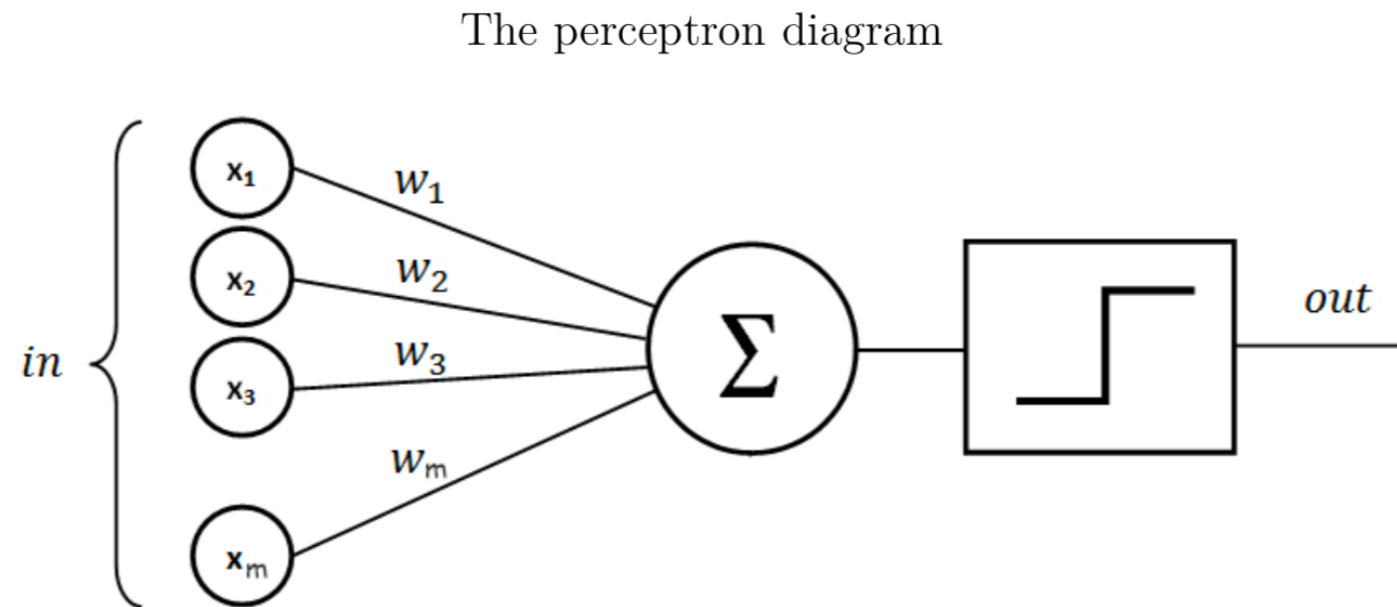

What is this function?

LINEAR REGRESSION – MINIMIZE ERROR

How to minimize the error?

ALMOST SAME THING BUT WITH W INSTEAD OF A!

Mathematically, the perceptron is a function that maps the input \mathbf{x} to a binary output $f(\mathbf{x})$.

$$f(x) = \begin{cases} 1 & \text{if } \mathbf{w} \cdot \mathbf{x} + b > 0 \\ 0 & \text{otherwise} \end{cases}$$

$\mathbf{w} \cdot \mathbf{x}$ is the dot product $\sum_{i=1}^m w_i x_i$,

w is a vector of weights

m is the number of inputs

b is the bias

CAN HAVE MULTIPLE LAYERS

EXERCISE

THANK YOU!
